

INVIEW

Infrared Video Goggles

InView™ for the observation of eye movements during Dix-Hallpike maneuvers, canalith repositioning procedures and vestibular rehabilitation therapy.

InView Goggles and Camera

- Ø High resolution b/w camera with infrared illumination
- Ø Push-button fixation light and microphone
- Ø Light-tight goggles eliminates fixation suppression
- Ø Fixed camera mounting for ease of use and durability
- Ø Second camera option for observing both eyes simultaneously
- Ø Use any video monitor with video input connector
- Ø Videotape eye movements
- Ø Play back video tapes for close-up evaluation, patient education, medical-legal reasons or scientific study.

InView™ infrared video goggles allow you to view and video tape nystagmus and torsional eye movements during vestibular testing and therapy.

InView, an essential and affordable tool for every examination room.
